

TECHNICAL DATA SHEET

BIO CLOUT

DESCRIPTION:

BIO CLOUT is a concentrated enzymatic laundry detergent, a “one shot” product containing all the essential ingredients to effectively launder all classifications.

APPLICATION:

BIO CLOUT is particularly useful in the removal of proteinaceous stains such as blood, egg, bodily discharge, foodstuffs and wines. The efficiency of the enzymes present is enhanced by washing at a temperature range of 35 – 40 degrees.

BIO CLOUT is safe in the removal of soiling and stains from both white and coloured articles. It eliminates greying, produces brilliant white work, and coloured fabrics re-gain their original brightness.

BIO CLOUT is very economical in use, depending on the degree of soiling and the recommended percentage is 0.50% to 0.70% on dry weight.
