

TECHNICAL DATA SHEET

D71 DEGREASER

D71 DEGREASER is a combination of highly active solvents, surface-active agents and emulsifying agents.

Due to its slow vaporizing properties, it is a product, which presents no problem when used in badly ventilated areas.

APPLICATION:

D71 DEGREASER can be used neat. Due to its properties it can be used universally on metallic, plastic, wooden or painted surfaces.

In shipping **D71 DEGREASER** is used for air coolers, deck cleaning and in a 5 – 10% emulsion for the cleaning of cooling systems.

D71 DEGREASER'S high emulsification powers will enable quick and efficient cleaning of engine room equipment, motors and machinery, large or small.

INSTRUCTIONS FOR USE:

D71 DEGREASER can be applied neat to the part to be cleaned by means of sprays or brushes or can immerse the article in a bath of cleaning liquid. After a short soaking period it can be rinsed off with water.

D71 DEGREASER can be safely applied on aluminium, zinc, copper, cast iron, chromium and on practically all painted surfaces.

PROPERTIES:

Light yellow coloured non-corrosive

Flashpoint of 85°C

Not dangerous in use

Does not impair rubber or paint systems in normal use

Do not use **D71 DEGREASER** in immediate vicinity of naked flame
