

TECHNICAL DATA SHEET

OVENKLEEN

OVENKLEEN is a highly caustic liquid and precautions should always be adopted prior to working with this product. Wear gloves and suitable eye protection. Ovens are best cleaned by heating to about 70 to 90°C and then spraying on the **OVENKLEEN** through a hand pump spray from a distance of about 20 to 30cms. Leave on for approx. 30 minutes before wiping off with a damp cloth and subsequent thorough rinsing.

OVENKLEEN should not be used in contact with aluminium, zinc or galvanised surfaces or painted finishes.

Use **OVENKLEEN** around the oven to remove heavily carbonised soils and for subsequent maintenance cleaning at dilutions varying from neat to one part plus 4 parts water.

PACKAGING:

OVENKLEEN is packed in 5 litre and 25 litre plastic containers and should be stored in a cool place away from acids and should not be stacked one on top of the other.

PRECAUTIONS:

When working with **OVENKLEEN** a bucket of clean water should be kept handy to rinse off any splashes on the skin.

In the event of accidental swallowing or eye contact, irrigate with copious quantities of water immediately and seek medical attention as soon as possible.
